Know These Cold

Every term here can show up on the AP exam. Fold the page to hide the definitions and quiz yourself, or quiz a partner.

1.1 Collaboration

Collaboration

Working with others toward a common goal

Computing innovation

An innovation that includes a computer program as an essential part

Computing

Using computational processes to solve problems

Perspective

A person's particular way of seeing or understanding a problem

Innovation

A new or improved idea, product, or process

Pair programming

Two programmers share one computer: a driver types and a navigator reviews

1.2 Program Function and Purpose

Program

a collection of program statements that performs a specific task when run by a computer (also called software)

Code segment

a collection of program statements that is part of a program

Behavior

how a program functions during execution; often described by how a user interacts with it

Event

an action that supplies input data to a program (click, key press, timer)

Event-driven programming

program statements run when triggered by an event, not in a set order

1.3 Program Design and Development

Iterative development

requires refinement and revision based on feedback, testing, or reflection; may mean revisiting earlier phases

Incremental development

breaks the problem into smaller pieces and makes sure each piece works before adding it to the whole

Program requirements

describe how a program functions; may include descriptions of user interactions

Name: _____

Class: _____

Date: _____

Unit 1 Vocabulary

Creative Development · Study Sheet

Program documentation

a written description of the function of a code segment, event, procedure, or program and how it was developed

Comments

documentation written in the program that is not executed

1.4 Identifying and Correcting Errors

Logic error

a mistake in the algorithm that causes incorrect or unexpected behavior; the program runs but is wrong

Syntax error

the rules of the programming language are not followed

Run-time error

an error that occurs during execution (e.g., dividing by zero, a bad list index)

Overflow error

a computer tries to handle a number outside its defined range of values

Debugging

the process of finding and correcting errors
