Create Performance Task

Student Packet

The Big Picture

The Create Performance Task is 30% of your AP score. You build a program, record a short video of it running, and make a Personalized Project Reference (PPR). On exam day, you answer written-response questions about YOUR code using your PPR.

What You Submit

- **Program code** (all of it, as a PDF)
- **Video** (1 minute or less, no voice narration) showing input, program functionality, and output
- **Personalized Project Reference:** screenshots of (1) your procedure and (2) where it is called, (3) where data is stored in your list, and (4) where that list is used. No comments in the PPR!

Exam Day

You'll answer written-response questions about:

- your program's design, function, and purpose
- your algorithm (sequencing, selection, iteration)
- errors and testing
- your data abstraction (list) and procedural abstraction

You **MUST** know your own code inside and out.

Program Requirements Checklist

- ☐ Input from the user, a device, an online data stream, or a file
- ☐ A **list** (or other collection) that stores data and is used to fulfill the program's purpose
- ☐ A **student-developed procedure** with at least one **parameter** that affects its functionality
- ☐ An **algorithm** inside that procedure that includes **sequencing, selection, and iteration**
- ☐ At least one **call** to your procedure
- ☐ Output (tactile, audible, visual, or text) based on input and functionality

Think:

Your list should be essential — if you could replace it with two variables, it isn't managing complexity. Your procedure's parameter must actually change what happens.

Timeline & Hours Log

9-Hour Rule

The College Board requires at least 9 hours of in-class time. Our calendar gives you 11 official sessions = 705 minutes (11.75 hours). Log every session below. Deadline to submit as FINAL in the AP Digital Portfolio: April 30, 2027, 11:59 PM ET (confirm with your teacher).

Date	Minutes	What I worked on	Teacher initials
Thu Feb 18	80		
Mon Feb 22	55		
Tue Feb 23	55		
Thu Feb 25	80		
Mon Mar 1	55		
Tue Mar 2	55		
Thu Mar 4	80		
Mon Mar 8	55		
Tue Mar 9	55		
Thu Mar 11	80		
Mon Mar 15	55		

Integrity & AI Tools

- Your program and video must be your own work (or your team's, if allowed — the written responses are always individual).
- You may use outside code, libraries, or AI tools to help, but you must **acknowledge** any code you didn't write in comments, and you must be able to explain every line.
- Your teacher may not give feedback that directly fixes or writes your code during official time.

Create Performance Task

Planning Sheet

My idea, and the problem it solves or interest it pursues (PURPOSE)

Who will use it? What input will they give? What output will they get?

My LIST: what data does it store, and how does the program use it?

My PROCEDURE: name, parameter(s), and what it returns or does

My ALGORITHM: where is the sequencing? selection? iteration?

Two calls with DIFFERENT arguments that cause DIFFERENT results

Create Performance Task

Testing, Video & PPR

Testing Log

Call / input	Condition tested	Expected result	Actual result

Video Checklist

- ☐ 1 minute or less
- ☐ Shows input to the program
- ☐ Shows at least one aspect of functionality
- ☐ Shows output produced
- ☐ No voice narration (captions OK)
- ☐ No personally identifiable info
- ☐ File type and size accepted by the portal

PPR Checklist

- ☐ Procedure definition (with parameter + algorithm)
- ☐ Where the procedure is called
- ☐ Where data is stored in the list
- ☐ Where the list is used
- ☐ NO comments in the screenshots
- ☐ Code is readable (large enough font)
- ☐ No names or PII

Written-Response Practice

Practice like it's exam day

Answer these about YOUR program using only your PPR. Practice until you can answer each in a few minutes, without looking at the rest of your code.

Prompt 1

Describe the overall purpose of your program and who it is designed for. Identify the input and output.

Prompt 2

Explain how your procedure's algorithm works in enough detail that someone else could recreate it. Identify the sequencing, selection, and iteration.

Prompt 3

Describe two calls to your procedure with different arguments that execute different code. Give the condition tested by each call and the result.

Prompt 4

Explain how your list manages complexity. How would your program be written without it?

Name: _____

Class: _____

Create Performance Task

Written-Response Practice (continued)

Prompt 5

Explain how your procedure manages complexity. What would happen if it didn't have a parameter?

Prompt 6

Describe one error you found while developing your program and how you fixed it.

Prompt 7

Suppose you wanted to add a new feature. Describe how you would modify your procedure or list to do it.
